

ANIKET CHAUHAN

Full-Stack Engineer • Backend-Heavy • 3.5+ Years Shipping Real Products

aniketchauhan7722@gmail.com • +91 8178546909 • Delhi NCR

WHAT I BRING TO THE ORGANIZATION

I'm a backend-heavy full-stack engineer who has owned entire product verticals — from API design and Database optimization to third-party integrations and deployments — in fast-moving product teams. I move fast, write clean code, and have a track record of shipping production systems that scale. I thrive in teams where ownership is real.

SKILLS

Core Languages: Node.js (Expert) • Javascript (Expert) • TypeScript • Go • SQL • C

Frontend: Angular • ElectronJS • Tailwind CSS • PrimeNG • Material • SCSS

Cloud & Infra: Amazon Web Services • Google Cloud Platform • Firebase • Vercel • Docker

Data & Caching: MySQL • Redis • PostgreSQL • MongoDB

Integrations: Razorpay / Stripe / PayPal • WhatsApp Business API • Google Maps • Gmail SMTP • FCM

Tooling: Git • Postman • Figma • FFMPEG • FabricJS • WebSockets • Nodemailer

Soft Skills: Agile/Scrum • Mentoring • Technical Writing • Cross-functional Collaboration

WORK EXPERIENCE

Solution Engineer | [Logicasana Pvt. Ltd](#) - Jun 2024 – Feb 2026

- Engineered the core backend of a wellness-industry [lookzup.com](#) SaaS/ERP platform — Architected a NodeJS / MySQL / Redis / Google Cloud Platform system handling high-volume multi-tenant transactions.
- Built high-throughput RESTful APIs for Wallets & Payments, Inventory, automated billing, Employee management and QR attendance — integrated FCM, WhatsApp, and Email for real-time low-latency notifications.
- Reduced API latency by 30% through MySQL indexing, optimized JOINS, lazy-loaded connection pooling, and Node.js worker threads for parallel background processing.
- Integrated Razorpay/Stripe/Paypal with webhook reconciliation and error handling; automated PDF invoice generation and delivery to business subscribers.
- Implemented AES encryption for sensitive data at rest; maintained data privacy compliance across the platform.

Solution Engineer | [Colorbracket Technologies LLP](#) - Sep 2022 – Jun 2024

- Built a global healthcare platform (Angular + Javascript + AWS Lambda + MySQL) for [Medical Tourism](#) platform handling complex lead-management workflows and a secure patient-doctor communication portal for international medical travel with advanced search features.
- Developed scalable backend services using Javascript, AWS Lambda, and MySQL for [Medical Tourism](#) Platform to support patient inquiries, hospital listings. Implemented serverless APIs and optimized database operations to improve platform performance, scalability, and reliability for high-volume international healthcare traffic.
- Engineered a live-streaming pipeline for [iSpeck](#) using FFmpeg to transmux RTSP feeds into HLS for web playback; built an interactive overlay for real-time region marking and shape rendering on multiple live camera video feeds.
- Designed a high-throughput PDF reporting pipeline capable of generating reports for thousands of records in real time.
- Developed the frontend of the **Cure Mantra** healthcare platform using Angular, Tailwind and SCSS, managing complete API integration across Doctor and Patient portals. Implemented core features including appointment scheduling, advanced doctor search & booking, family/vitals management with charts, online payments, notifications (WhatsApp, FCM, Email), and dashboard workflows.

- Implemented advanced doctor search, appointment booking, family management, vitals tracking, and calendar-based healthcare workflows for patients. Integrated real-time notifications and communication systems using WhatsApp, FCM, and email for appointment and payment updates.
- Delivered responsive healthcare dashboards with charts, online payments, invoice generation, reviews/ratings, and historical medical data visualization.

PROJECTS

CLIP — Cross-device LAN Interlinked Paste — *Node.js • WebSockets • UDP*

- Real-time clipboard sync across devices on a local network Used UDP broadcasting for peer discovery and WebSockets for instant clipboard push/pull between all connected devices.

RadiusReach — *Node.js • Google Maps API • Angular • ElectronJS*

- Precision outreach platform that lets businesses discover, organize, and automate communications with other businesses within any geographic radius — turning maps into automated lead pipelines.

EDUCATION

Bachelor of Computer Applications (BCA) - *Dec 2023 – Present*

IGNOU (Indira Gandhi National Open University)
